Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for general electronic equipment use.

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- Traffic signals • Gas leakage sensor breakers • Alarm equipment • Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications • Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

1. Application

This specification applies to color TFT-LCD module, LQ057Q3DC12.

2. Summary and Features

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit (PWB), FPC, front and back polarizer, sealed case, backlight unit. Graphics and texts can be displayed on a $320 \times \text{RGB} \times 240$ dots panel with 262,144 colors by suitable control supplying from the outside.

It isn't composed DC/AC inverter for a backlight drive.

- The input of QVGA and VGA signal is possible.
- Wide Viewing Angle technology is adopted. (The most suitable viewing angle is in the 12 o'clock direction.)
- By adopting an active matrix drive, a picture with high contrast is realized.
- Reflection due to external light is minimized through the use of a low reflection black matrix.
- A thin, light and compact module is accomplished through the use of COG mounting technology.
- Through the use of high color purity color filter and TN-normally white mode excelled in color reproducibility, an image with highly natural color reproduction is realized.
- High viewing angle and high brightness (500cd/m²).
- An inverted video display in the vertical / horizontal directions is possible.
- This module is adapted to RoHS compliance.

【Note 5-2】 This rating applies to all parts of the module and should not be exceeded.

【Note 5-3】 Maximum wet-bulb temperature is less than 39°C. Condensation of dew must be avoided as electrical current leaks will occur, causing a degradation of performance specifications.

【Note 5-4】 The operating temperature only guarantees operation of the circuit. For contrast, speed response, and other factors related to display quality, judgment is done using the ambient temperature Ta = +25°C.

Note) When ENAB is fixed “Low”, the display starts from the following data as shown in Fig.7.
V/Q = “H” C104 (clock) V/Q = “L” C52 (clock)

7-3. Vertical display position

The Vertical display start position (TVs) is fixed 34 line (V/Q =H) and 7 line (V/Q = L).
ENAB signal has no relation to the vertical display position.

Lamp test in the module is made with the following inverter:

HIU-288 [Output condenser : 22pF] TOSHIBA HARISON LIGHTING co. Ltd.

※ The optical specifications are measured 30 minute after turing lamp on and in a dark room or equivalent condition, according to the method shown in Fig.9-1 below.

Fig.9-1 Optical characteristics measurement method

【Note 9-1】 Viewing angle range is defined as follows.

The best viewing angle of this module is slightly leaned to 12 o'clock from normal line.

Where $\theta_{11} > \theta_{\max}$, gray scale is reversed partially.

Where $\theta_{11} < \theta_{\max}$, or in θ_{12} direction, gray scale isn't reversed.

【Note 9-2】 Contrast ratio is defined as follows:

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

※ Measurement point : Center of the active area

【Note 9-3】 Response time is obtained by measuring the transition time of photo detector output, when input signals are applied so as to make the area "black" to and from "white".

【Note 9-4】 This parameter should be measured at the center of the screen and 30 minutes after turn-on.

Inverter frequency: 49kHz

The characteristics are measured when the driver circuit is not powered.

【Note 9-5】 The data for lamp is for your reference, because lamp is consumable component.

a) Lamp life time is defined by either 1 or 2 below.

(Continuous turning on at $T_a=25^\circ\text{C}$, $I_L=5\text{mA rms}$)

- ① When a brightness of lamp surface become 50% of the initial value under the standard condition.
 - ② When a kick-off voltage in $T_a = -10^{\circ}\text{C}$ exceeded maximum value(1470 Vrms) at the output of inverter circuitry.
- b) In case of operating under lower temp. environment, the lamp exhaustion is accelerated and the brightness becomes lower.
(Continuous operating for around 1 month under lower temp. condition may reduce the brightness to half of the original brightness.)

10. Handling instructions

10-1. Mounting of modules

- ① The TFT-LCD module is designed to be mounted on equipment using the mounting tabs in the four corners of the module at the rear side. On mounting the module, as the nominal diameter 3.0mm tapping screw (fastening torque is 0.25 through 0.30 N·m) is recommended, be sure to fix the module on the same plane, taking care not to wrap or twist the module. The depth of tapping screw embedded into LCD module must be less than 5mm.

The pressing module, (ex. touching switch etc.) causes disordered image. So taking care for pressure not to conduct directly to LCD module.

- ② Please power off the module before you connect or disconnect input connector.
- ③ Connect the metallic shielding cases of the module and the ground pattern of the inverter circuit firmly. If that connection is not perfect, there may be a possibility that the following problems happen.
 - a) The noise from the backlight unit will increase.
 - b) The output from inverter circuit will be unstable.
 - c) In some cases, a part of module will heat up.

10-2. Precautions in mounting

- ① Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- ② Method of removing dust from polarizer.
 - Blow off dust with N2 blower for which static electricity preventive measure has been taken.
 - Since the polarizer is easily damaged, wiping should be avoided. If the panel has stain or finger grease, we recommend to use adhesive tape to softly remove them from the panel. Inevitable, wipe off by cleaning cloth for a lens with carefully, breathing on it.
- ③ When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth. For stubborn dirties, wipe the part, breathing on it.
- ④ Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- ⑤ TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. handle with care.
- ⑥ Since CMOS LSIs are incorporated in this module, take care of electrostatic and earth human body while handling.

10-3. Caution of product design

The notes and cautions below should be followed when product is designed with this module.

- ① The LCD module should be protected against water salt-water by the waterproof cover.
- ② Take enough shielding countermeasure not to interfere to peripheral electric device.

10-4. Others

- ① Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours; liquid crystal is deteriorated by ultraviolet rays.
- ② If stored at the temperature lower than rated temperature, the liquid crystal may freeze and it may cause LCD panel damage. If storage temperature exceeds the specified rating, the molecular orientation of the liquid crystal may change to that of a liquid, and they may not revert to their original state. Store the module in normal room temperature.
- ③ The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump lead line around.
- ④ If LCD panel breaks, there may be a possibility that the liquid crystal escapes from the panel. If the liquid crystal drip into the eyes or mouth washes it out immediately.
- ⑤ The caution to other ordinal electronic component should be followed also.

11. Shipping requirements

- a) Number of layers of cartons in pile : 12 layers max.
- b) Maximum number of product contained: 20 units per 1 carton.
- c) Carton size : 442mm(W) × 390mm(H) × 170mm(D)
- d) Total mass (for 20 units) : Approximately 5.5 k g
- e) Carton stock environment :
 - ① Temperature 0°C to 40°C
 - ② Humidity 60%RH or less
 - ③ Atmosphere Harmful gases such as acid and alkali which corrode electric components and wires must not be detected.
 - ④ Storage period Approximately 3 months
 - ⑤ Opening of package To prevent TFT-LCD module from being damaged by electrostatic, adjust the humidity to 50%RH or higher and provide an appropriate measure for electrostatic earthing before opening the package.

- b) Adjusting volumes have been set optimally before shipment. Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described here may not be satisfied.
- c) Disassembled the module, it may cause malfunction.
- d) Be careful since image retention may occur when a fixed pattern is displayed for a long time.
- e) Liquid crystal panel drive input FFC/FPC specification

4	High temperature operating test	Operates the module at $T_p = +80^{\circ}\text{C}$ for 240h 【Note 1】
5	Low temperature operating test	Operates the module at $T_p = -30^{\circ}\text{C}$ for 240h 【Note 1】 (The lifetime of a CCFT is not included)
6	Strength against ESD	$\pm 200\text{V} \cdot 200\text{pF}(0\Omega)$ 1 time for each terminals
7	Shock test (non-operating)	$490\text{m/s}^2 \cdot 6\text{ms}$, $\pm X$; $\pm Y$; $\pm Z$ 3 times for each direction (JIS C0041, A-7 Condition C)
8	Vibration test (non-operating)	Frequency : $5 \sim 57\text{Hz}$, Stroke : 0.15mm Frequency : $58 \sim 500\text{Hz}$, Acceleration : 9.8m/s^2 Sweep cycle : 11 minutes X, Y, Z 1 hours for each directions (total 3 hours) 【Note 2】 (JIS D1601)
9	Thermal shock test	$T_a = -30^{\circ}\text{C} \sim +80^{\circ}\text{C}$, 200 cycles (0.5h) (0.5h)

【Result evaluation criteria】

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

【Note 1】 T_a = Ambient temperature, T_p = Panel surface temperature

【Note 2】 X, Y, Z directions are shown as follows:

- 1) Take care in set design to hide the scratches and bubbles appeared on the polarizer or other flame area which is located outside of active area.
- 2) CN1: I/O connector is FH12-33S-0.5SH (55) (HIROAE electric)
CN2: CCFT connector is BHR-03VS-1 (JST)
- 3) The whole curvature is not included thickness direction.
- 4) Recommendation screw is nominal size 3mm tapping, amount of invasion: 5mm.
